

SAFE AIR QUALITY IN-PERSON LEARNING SITES

FILTERING THE AIR IN SCHOOLS

Top-line MERV-13 filters are installed in buildings that can handle them. Air purifiers are installed in classrooms and support spaces not equipped to use MERV-13 filters, as well as health suites and isolation rooms.

VENTILATION IS FIRST-LINE DEFENSE AGAINST CONTAMINATION

Schools with outdoor air ventilation systems were inspected and tested for proper operation. Schools without these systems will receive air purifiers.

WE PERFORM PREVENTATIVE MAINTENANCE AND INSPECTIONS

Regardless of condition, City Schools monitors our ventilation systems for the best performance. Work occurs after school hours.
